

Fertri's warehouses are similar to greenhouse structures but covered with rigid materials such as polycarbonate, metallic sheets or panel sandwich.

This kind of construction is the perfect solution to store machinery, tools or any other materials required to be near the greenhouse.

They are modular structures easy to assemble and the best solution to optimize the space.

Space saving

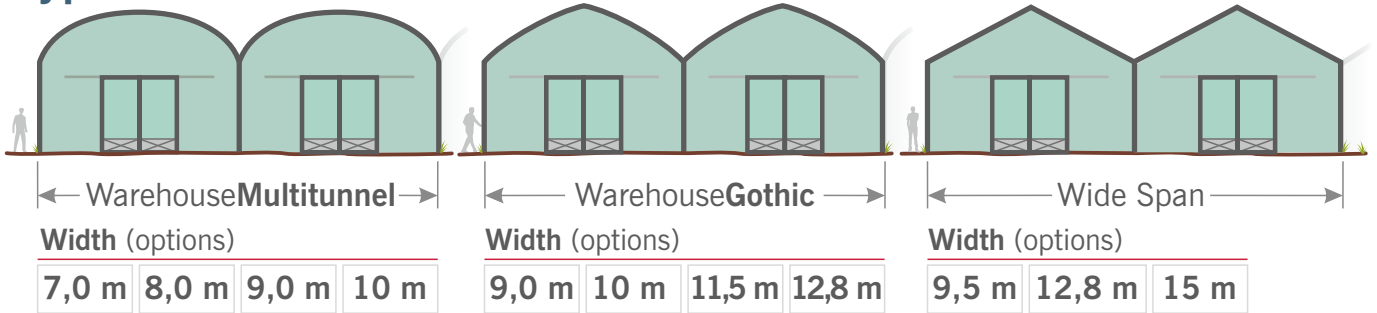

Easy to assemble

Agriculture support

High resistance

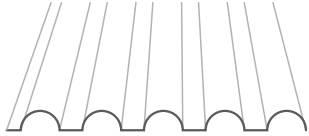

Rigid covering

Types of warehouses

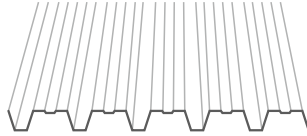

Height (under gutter): 3 - 5 m ·· More information see catalogs: Multitunnel - Gothic - Wide Span.

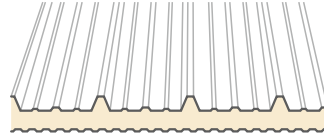

Covering Materials

Polycarbonate
 Opaque combined with transparent

Metallic Sheets
 Simple lacquer

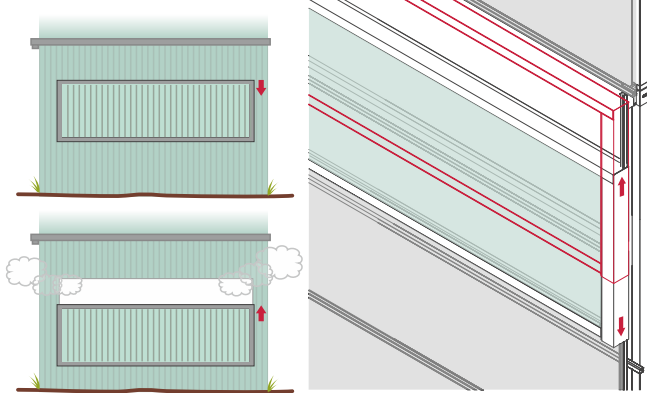

Panel Sandwich
 * Only available on the roof for wide span

Green&White Plastic
 * Not available for wide span

Ventilations (Optional)

Guillotine Ventilation

Zenithal Ventilation
